

What's in the Box

- Looking Glass 15.6"
- HDMI Cable
- USB-C Cable
- Microfiber Cloth
- 12-20VDC Power Adapter
- Leap Motion Controller (Add-on)

Basic Setup

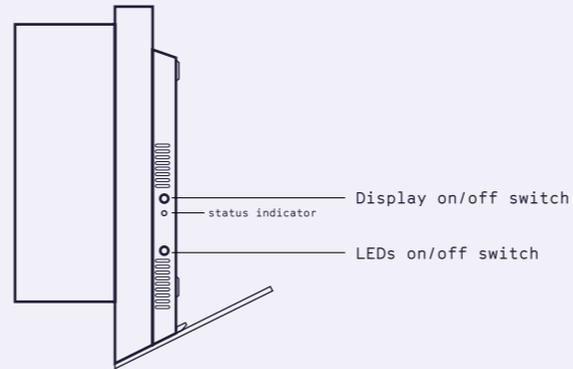

Your Looking Glass 15.6" comes with a baseplate. To avoid damaging the glass surface of your Looking Glass 15.6", we recommend installing the baseplate as follow. No tools needed!

1. Place your Looking Glass 15.6" face-up on the edge of a flat surface.
 2. Leave enough room to slide the base plate from underneath (black side facing out).
 3. Align the three bolts with the three slots.
- When aligned, push the plate up. You should hear a soft *click*.

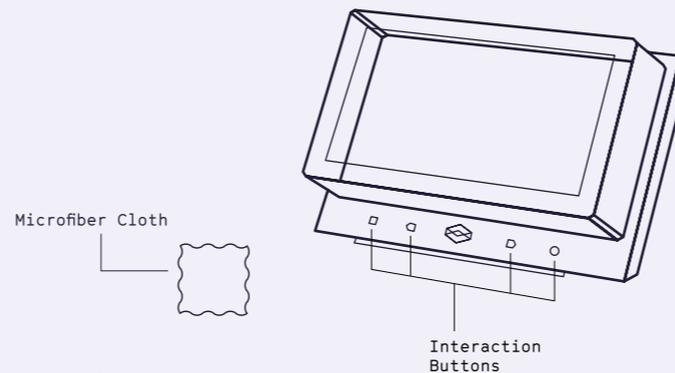

Switches

There are two switches on the side of your Looking Glass 15.6". One will switch ON/OFF the display and the other will switch ON/OFF the LEDs that illuminate the display (pictured above).

Buttons

There are four buttons on the front face of the aluminum housing of the Looking Glass 15.6". Each of these buttons performs a different action for each Looking Glass app.

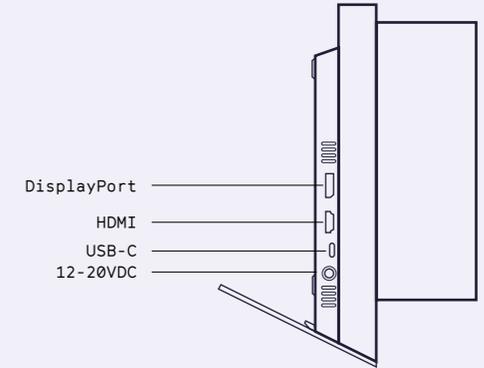

Cleaning Note

Please clean your Looking Glass only with the included microfiber cloth. Do not clean with other cleaning agents or rubbing alcohol as this will damage the front-surface of the Looking Glass Display.

Cable Connection

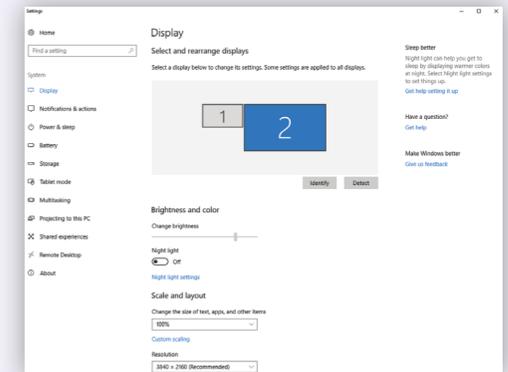

Connect the HDMI cable and USB-C cable to your host computer and plug the power adapter into a 110v-220v power source. Once power and the HDMI and USB-C cables are connected, you should see LEDs around your Looking Glass light up and your computer desktop should appear in the Looking Glass. If not, check all cables connections and try to click the ON/OFF switch for your Looking Glass 15.6".

Display Settings

PC:

- Verify that your displays are extended
- Set your second display to 3840px x 2160px.
- Ensure that the second display is set to 100% scale
