# How to manage the content of internal pages

### Page edit

- The content manager tool within your back office is rich in features that will allow you to create and edit your platform's internal pages.
- The three main features which you can start exploring are presented in this document:
  - how to add images
  - $\circ$  how to add videos
  - how to link websites and files

• Drag and drop the image in the folder and select it by double clicking on it to go back to the image properties.

- The image's dimensions can be modified using the 'Width' and 'Height' fields.
- The 'lock' icon controls the aspect ratio. If you click on it you will be able to resize the width and height independently of each other.
- The alignment can be set using the provided drop down menu

Alignment				

- To link a URL to the image, input it in the appropriate field within the 'Link' tab.
- To link a file, click on 'Browse Server'. The process is the same as the one seen <u>here</u>.
- The target can be defined using the 'Target' drop down menu. It will determine if the linked website or file will open in the same page or in a new one.

## How to add videos

- A YouTube video needs to be embedded using the code provided by YouTube
- In order to access that code, go to the video and click on the 'Share' button displayed under it.

#### Share a link

- Once there, click on 'Embed'.
- Copy the code, as you will need to paste it in your back office

### Go to your page and click on 'Source' to view your page's source code

Paste the code you retrieved from • Youtube in the content area
